

Ajitesh Borah

Delhi NCR, India | github.com/FelicityIris | linkedin.com/in/ajitesh-borah

Summary

Computer Science undergraduate at VIT Vellore with hands-on industry experience building and deploying full-stack web applications. Interned at NHPC Limited, developed a production-ready geospatial alert system with a REST API, admin dashboard and Intranet deployment. Comfortable across the stack from database design and backend APIs to CI/CD pipelines and Linux server administration

EDUCATION

Vellore Institute of Technology, Vellore 2024 – 2028
Bachelor of Technology – Computer Science and Engineering CGPA: 9.07

Modern Delhi Public School, Sector-87, Faridabad
Central Board of Secondary Education (CBSE)
Class XII (Senior Secondary) 83.4% · 2023
Class X (Secondary) 96.5% · 2021

WORK EXPERIENCE

NHPC Limited May 2026 – June 2026
Software Development Intern

- Developed NDMA GeoAlert Dashboard, a NDMA alert aggregation dashboard ingesting live API data and rendering alerts on an interactive Leaflet.js map with proximity-based warnings via WGS84 geodesic calculations on company infrastructure coordinates.
- Optimised API fetch scheduling to minimise rate-limit conditions; fetch intervals and thresholds are configurable through the admin panel.
- Exposed a REST API to serve aggregated alert data from the MySQL database to other internal company services.
- Built a full-featured admin dashboard with settings configuration (alert radii, fetch intervals) and server log display.
- Deployed on a LAN intranet using Gunicorn and APScheduler; maintained a normalised MySQL schema for data storage and deduplication.

PROJECTS

NDMA GeoAlert Dashboard May 2026 – June 2026
Python, Flask, MySQL, Leaflet.js, APScheduler

- NDMA alert aggregation system with proximity warning generation, internal REST API, admin dashboard, and rate-limit-aware fetch scheduling deployed on a LAN intranet.
- Repository: <https://github.com/FelicityIris/NDMA-GeoAlert-Dashboard>

QtPlantly – Plant Health Monitoring Application May 2025 – June 2025
Backend Developer & Team Lead · C++, Qt, SQLite, GitHub Actions

- Architected a cross-platform C++/Qt desktop application for plant health monitoring with an SQLite backend; led the team through code reviews, Git workflows, and CI/CD pipeline setup via GitHub Actions.
- Repository: <https://github.com/BibekTripathy/QtPlantly>

TECHNICAL SKILLS

Programming Languages: C, C++, Python, Java, JavaScript, Rust

Full-Stack Development: MERN Stack, Django, Flask

Frontend Technologies: HTML, CSS, Tailwind CSS, Bootstrap

Databases: MySQL, MariaDB, MongoDB, SQLite | Database Design & Normalization

Backend & APIs: REST API Development, CRUD Application Development

DevOps & Tooling: Git (GitHub, Codeberg, Gitea), GitHub Actions, Bash/Shell Scripting

Operating Systems: Linux – System Administration & Server Deployment
